

## PRESS RELEASE

# The definitive solution to park scooters, winner of the challenge !REBEL.BUILD

Miquel Puig, President of the !Rebel.Build Challenge Jury ([www.bcnmobility.com](http://www.bcnmobility.com)), delivered the award to Aran Anyó i Bolea, winner of the first edition.

!Rebel.Build is an open innovation competition led by INMESA, in its ongoing commitment to achieving smart and sustainable mobility.

The scooter has become one of the key vehicles to make the mobility of people in the big cities of the world more flexible and agile. It has also relieved congestion in cities and the burden on traditional transport systems with minimal energy consumption.

But at the same time, the lack of appropriate vehicle parks represents a challenge and limits its growth potential.

The “Aparcament de Patinets” project presents an innovative solution to solve this problem.

The “Aparcament de Patinets” project submitted to the !REBEL.BUILD challenge has been chosen as the winner by the Jury, after analyzing the merits in the sections subject to consideration by the Jury:

- Previous analysis study
- Design improvement proposal
- List of components (boom)
- List of investments
- Final report with a mock-up and/or prototype

The Jury has highly valued the quality and the ideas presented by the participants to the Challenge, and appreciates the generous participation of all.
